

Creating an ArcGIS Story Map (Map Journal Example)

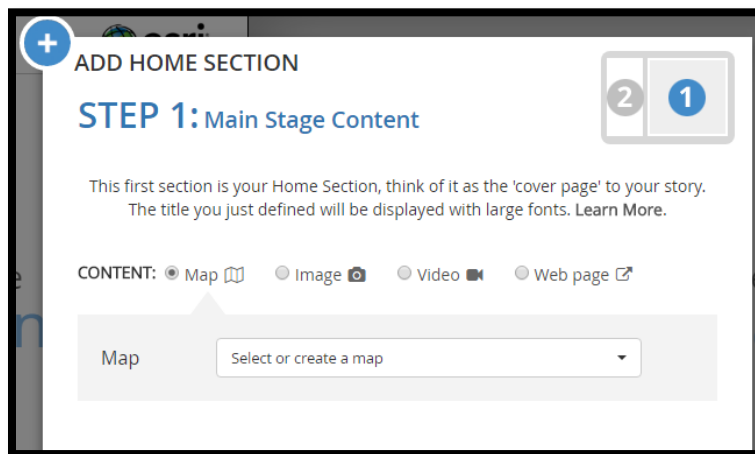

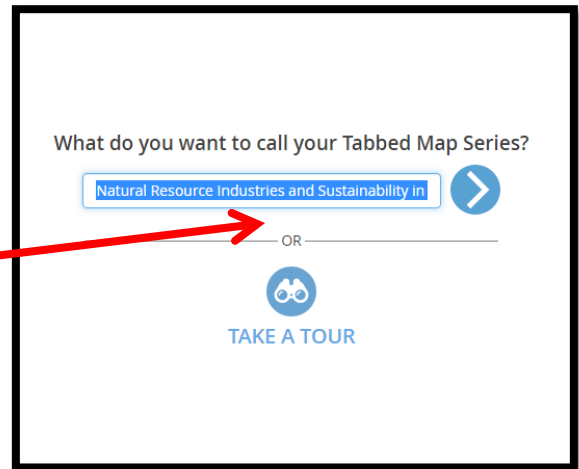

1) Go to the website

<http://storymaps.arcgis.com/en/app-list/>

2) Scroll through and select the Story Map you would like to build

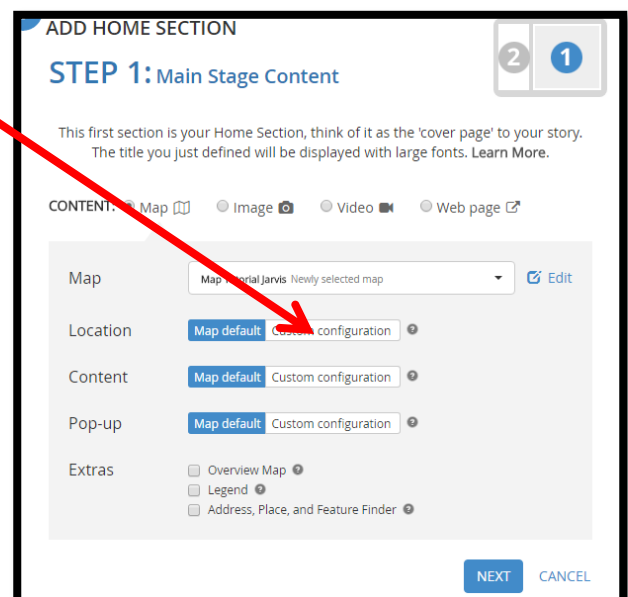

3) Make a title for your Story Map

4) Add a Map, Image, Video or Website to your Main Stage Content to begin

5) If you add a map you can orient that map that way that suits you best.

You could use the same map multiple times on your story map but just custom the configuration so to it starts at different points on your map you already created.

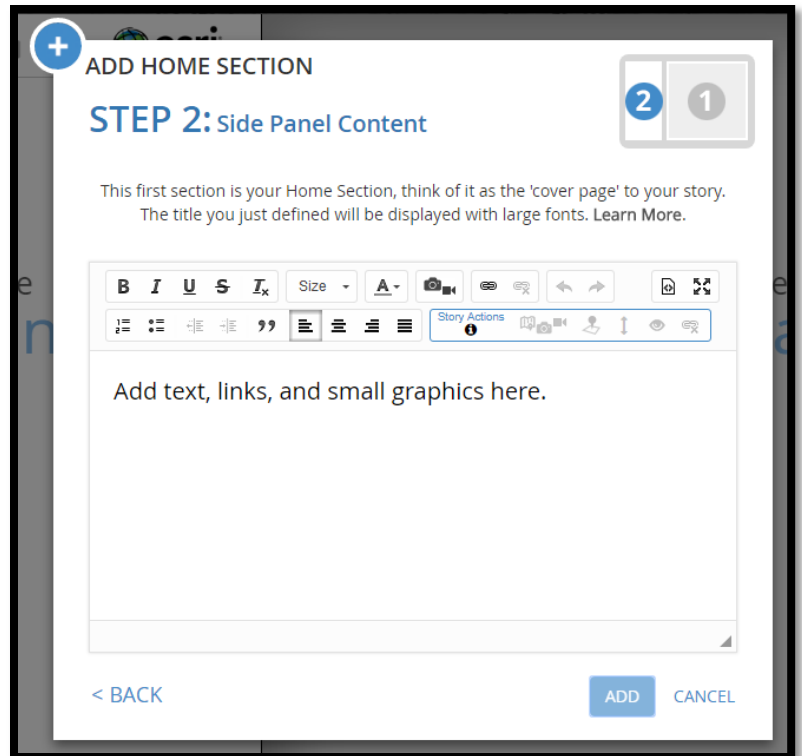

6) Now you can start to add content to your side panels to describe information you want to include on your story map.

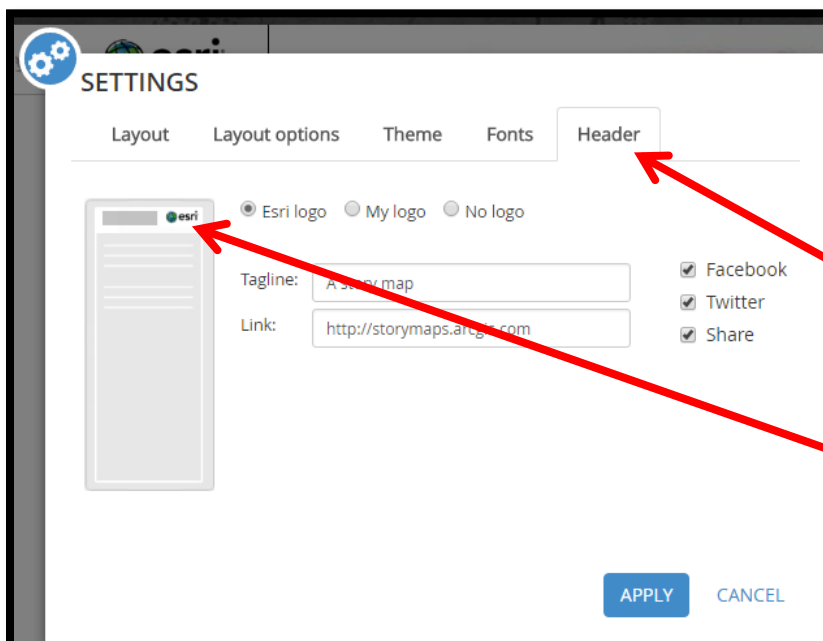

7) You can add more content by selecting the add selection icon.

Here you add as many maps, images, videos or websites that you need to your Main Panel and Side Panels.

8) Click the Settings Icon along the top menu bar to change details to your Story Map.

Here you can make changes to the layout, layout options (size and direction of main/side panels), theme, fonts, and header.

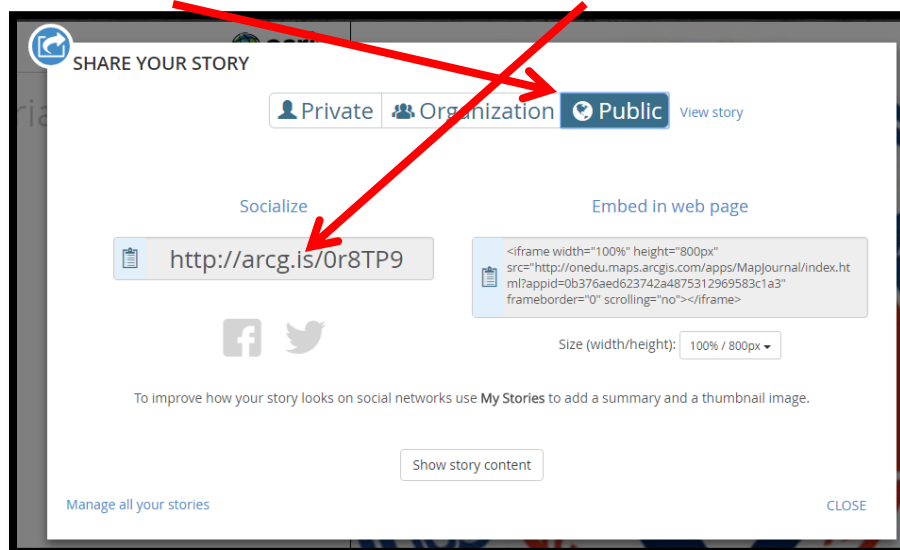

The header is where you can change and customize the logo and title of your story map you see on the side panels.

9) Make sure to continually click the  icon as you start to include more content so you do not lose any of your work.

10) When you are finished your Story Map click on the share icon.

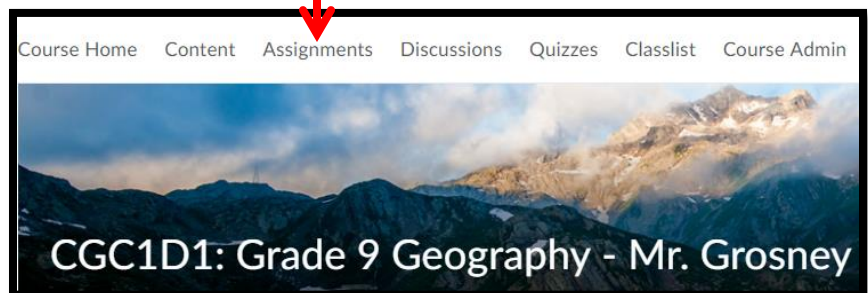

Click on the Public icon and then copy the short web link to your Story Map.

11) Now go to D2L <https://tdsb.elearningontario.ca/d2l/home>

12) Go to our class website and click on the assignments folder.

13) Click on the folder you need to hand the assignment into and in the comments section now paste the web link from above (Step 10).

Remember that you need to include a file to submit your assignment: include the word document file of all your side panel content slides.
